(<https://github.com/rubenarslan/codebook>)

Generate markdown codebooks from the attributes of the variables in data frame

```
knitr::opts_chunk$set(
  warning = TRUE, # show warnings during codebook generation
  message = TRUE, # show messages during codebook generation
  error = TRUE, # do not interrupt codebook generation in case of errors,
               # usually makes debugging easier, and sometimes half a codebook
               # is better than none
  echo = FALSE # don't show the R code
)
ggplot2::theme_set(ggplot2::theme_bw())
```

```
## Registered S3 methods overwritten by 'ggplot2':
##   method      from
##   [.quosures  rlang
##   c.quosures  rlang
##   print.quosures rlang
```

```
pander::panderOptions("table.split.table", Inf)

load("C:/Users/tingting/Downloads/t1.RData")
codebook_data = t1
```

##Sometimes, the metadata is not set up in such a way that codebook can leverage it fully. These functions help fix this.

```
## Registered S3 methods overwritten by 'codebook':
##   method      from
##   as_factor.character forcats
##   as_factor.numeric  forcats
```

If you are not using formr, the codebook package needs to guess which items

form a scale. The following line finds item aggregates with names like this:

```
scale = scale_1 + scale_2R + scale_3R
```

identifying these aggregates allows the codebook function to automatically compute reliabilities.

However, it will not reverse items automatically.

Note that the `echo = FALSE` parameter was added to the code chunk to prevent printing of the R code that generated the plot.

#generating a codebook is as simple as calling codebook from a chunk in an rmarkdown document.

```
## No missing values.
```

Metadata

Description

Dataset name: codebook_data

The dataset has N=205 rows and 9 columns. 205 rows have no missing values on any column.

- Metadata for search engines
 - **Date published:** 2019-05-07
 - **keywords:** *time, status, sex, age, year, thickness, ulcer, exit.date* and *site*

Variables

time

0 missing values.

status

0 missing values.

sex

0 missing values.

age

0 missing values.

year

0 missing values.

thickness

Distribution

Summary statistics

0 missing values.

ulcer

Distribution

Summary statistics

0 missing values.

exit.date

Distribution	Summary statistics
## 205 unique, categorical values, so not shown.	

0 missing values.

site

Distribution	Summary statistics
--------------	--------------------

0 missing values.

Missingness report

Codebook table

name	data_type	missing	complete	n	empty	n_unique	median	min	max	mean
	A		/			/				
time	integer	0	205	205						2152.8
status	integer	0	205	205						1.79
sex	integer	0	205	205						0.39
age	integer	0	205	205						52.46
year	integer	0	205	205						1969.91
thickness	numeric	0	205	205						2.92
ulcer	integer	0	205	205						0.44
exit.date	Date	0	205	205		205	1999-07-02	1999-01-01	2000-01-01	
site	character	0	205	205	0	5		4	24
